

About Our Company

The purpose of *Bargain Books* is for students who are in need of textbooks, but are on a budget. Textbooks now-a-days can be extremely expensive, but with *Bargain Books*, we will find you what you need, for the cheapest price point. On our application, we take what is on Google books and other sources, and bring them to people in need of textbooks with easy access through our app. Users can either enter in the name of the textbook or the ISBN number of the book and our program will then show the student not only the price but the author and provide a link directly to the website for purchase.

PROBLEM:

SOLUTION:

How We Got Here:

We are three students that did not know the proper way to search for textbooks without spending an absurd amount of time and money. Throughout our research, we came across Google books and a few other sources, which are very useful tools, however we wanted to make it more accessible to other students. We created the Bargain Books application to solve this problem. We hope everyone finds this application as useful as we do.
